

June 2026 Commissions — Summary

Sales Compensation Analyst case · Model: June_2026_Commission_Model.xlsx (all figures are live formulas; model checks: ALL PASS)

\$405,632.86

Recommended June payout, 80 reps
(USD)

\$413,713.46

Plan applied exactly as written

\$8,080.60

Held on one account pending review

Bottom line. June can be paid at \$405,633 with one exception. A rural GTM account closed by Jon Snow posted 313 shifts and filled 45; the plan pays GTM on *posted* shifts, so as written it would pay \$8,081 on shifts nobody worked (Jon \$7,883 → \$1,666, plus his manager, the Director of Sales and the Head). That one finding is worth more than every other finding combined (\$8,081 vs \$5,912). I recommend holding it, not cancelling it, until ops confirms who posted the shifts.

1. Exceptions ledger — ranked by payout impact

"Payout moved" = treated payout vs a naive processing of the same rows. Full ledger with root causes and live record counts: tab Exceptions_Ledger.

#	Finding	Records	Credit \$ moved	Payout moved	Treatment
1	E01 GTM shift-template inflation on account b2b39ae1 (closer Jon Snow, owner Dorothy Gale)	313	\$35,175	\$8,081	Recommended layer credits GSV of worked shifts only; unworked postings held pending ops/leadership review (A18)....
2	E02 Expansion / renewal Closed Won dated in June on accounts live for months	22	\$247,316	\$3,321	Go-live = MINIFS of Closed Won effective date (Calc_Opps). Payout \$: reference variant 'latest Closed Won as go-live'.
3	E04 Credit recognised outside the closer's employment (leavers Severus 29 May, Katniss 12 Jun;...	12	\$20,874	\$1,437	Credit split by shift date / window-close date vs HR employment; the un-creditable part rolls up to the manager....
4	E10 GTM postings made before the first worked shift, in an already-closed month	19	\$2,916	\$621	Caught up in June, the first month the credit was knowable (A9). Payout \$: reference variant 'no catch-up'.
5	E06 Denied billing tickets	135	\$36,136	\$533	Only status = approved reduces Existing revenue. Payout \$: reference variant 'deduct denied'.
6	E05 Blank closed_by_owner_id on two June go-lives	2	\$1,432	\$0	No one credited (\$ shown is credit left unpaid). Sales ops to fix CRM ownership before July so later windows are paid...
7	E08 Approved credits on accounts that are not Existing in the month	25	\$8,249	\$0	No effect on pay; listed so finance sees credits not charged to anyone (A6).
8	E03 closed_won_date populated on Negotiation / Closed Lost rows	12	\$0	\$0	opportunity_stage governs; residue ignored. Verified \$0 effect in June.
9	E07 HR role start earlier than previous role end (Jay Gatsby, Scout Finch, Lord Voldemort)	3	\$0	\$0	Current Role Start Date used (A-2, A19); HR to correct before July.
10	E09 Walter White: HR start 2021 vs Slack 'started two weeks ago'	1	\$0	\$0	HR governs (A16, A20); ask HR to confirm before July. Not sized: no alternative start date on record.

Untangling stacked issues. Jon Snow's account carries both E01 and E10 (GTM catch-up). Sized in waterfall order (E01 first), E10 counts only his worked pre-June postings (\$621 total); sized on the as-written basis it would be \$915, so \$294 of overlap is counted once, under E01. Katniss Everdeen (left 12 Jun) stacks a leaver split (E04) on top of four new accounts: credit recognised through 12 Jun is hers (\$230.20); everything after rolls to her manager, Bruce Wayne, under 7.11.

2. Assumptions where the plan is silent — and my recommendation

- **Two numbers, side by side.** Data errors are fixed by the plan's own rules in both; payouts the plan allows but I would not sign off sit in a separate, switchable Treatments layer (A1).
- **GTM is marked by account_type**, since no shift-level Applied Science tag exists in the export (A17). **GTM posted before the first worked shift** in a closed month is paid in the first month it becomes knowable (A9); once GTM, all windows compare GSV with GSV (A8).
- **Credits on accounts not yet Existing** reduce nobody's pay and are listed for finance (A6). **A month that nets negative** pays \$0, with no clawback without a written policy (A7). None occurred in June.
- **Ramping** = any day of the month inside a ramp month: no accelerators, no SPIFF (A10). **Role changes** price the whole month at the month-end HR role (A11). **HR governs** role, dates and reporting line over the roster (A16), and Current Role Start Date starts the ramp even where HR's previous-role end is later (A19: \$0 effect in June; HR to fix before July).
- **Rounding:** full precision throughout, round USD once per rep, convert at the tab 3 rate, round local to cents (A12). The plan names no FX date; the single tab 3 rate is used.
- **Statements already paid:** underpayments paid promptly; overpayments go to sales leadership for a written decision, never deducted automatically (A14).
- **first worked shift** is taken as given (A15); **Walter White's** HR start (2021) stands despite Slack saying he just joined (A20) — HR to confirm.

3. Plan change: SMB AE accelerator 1.2x/1.3x → 1.3x/1.5x

June as paid (corrected, recommended)	June repriced	Delta	Reps affected
\$405,632.86	\$407,010.42	+\$1,377.56	12

Assumptions. Same credited revenue (June is already worked, so no behaviour change); bands stay at \$30k/\$40k; ramping reps stay ineligible; managers are paid on revenue, not commission, so they do not move.

What surprised me.

- **It is cheap, and it mostly pays the near-misses.** +\$1,378 is 0.34% of June payout. Only 12 of 28 SMB AEs are above \$30k and not ramping, and \$1,180 of the cost is band I (the \$30–40k step), not the 1.5x top band: only 3 reps reach \$40k (largest gain: Yoda, +\$289).
- **On the plan as written, the biggest winner would be Jon Snow (+\$339)**, whose band II dollars come from unworked GTM postings. Raising the top multiplier raises the payoff to exactly the behaviour E01 describes. Fix the GTM measure before raising accelerators (delta on as-written basis: +\$1,716).
- **Ramping reps are excluded regardless of performance.** Gimli (rehired in May) finished at 120% of quota and gains nothing under either version; the plan's no-accelerator-while-ramping rule matters more than the multiplier.

4. Slack — the three I would escalate

1. **GTM posting volume (Jon Snow 3, 8 & 15 Jun; Doc Brown 2 Jul; Forrest Gump 3 Jul; Bruce Wayne 6 Jul; Dorothy Gale 7 Jul).** Five people describe the same account. It is the largest dollar issue, it recurs every month the template stays open, and only leadership can approve a hold under 7.14.
2. **Katniss Everdeen (1 Jul): "Left on the 12th — will my June commission still process?"** A departed employee, real money, high trust stakes. Yes: she is paid for credit recognised through 12 Jun (\$230.20); later credit rolls to her manager under 7.11. She needs a clear, written answer before the statement, not after.
3. **Scout Finch (4 Jul): "122% of target but not accelerator eligible because I'm ramping."** Correct under the plan, but her ramp clock rests on an HR record that contradicts itself (role start 1 May, previous role end 31 May), as do Jay Gatsby's and Lord Voldemort's. One HR fix before July removes three disputes.

Also real but lower stakes: Legolas (statement credited a deal in Negotiation — evidence the old process counted residue dates), Dr. Watson (SPIFF at ~90%, not "a shade under"), Darth Vader's July \$500 offer (not in the plan; needs written approval to be payable).

Note to sales leadership (≤250 words)

Subject: June commissions — one payout I recommend we hold

June is ready at \$405,633. Paying the plan exactly as written would cost \$413,713; the \$8,081 difference is one account.

A rural facility in Jon Snow's book went live on 1 June. GTM accounts are paid on shifts *posted*, not worked. In June this one posted 293 shifts and 45 were worked — other GTM accounts fill about 78%. Jon told #sales-ops he has been loading shift templates for sites with no scheduler; the facility's director of nursing says they post a handful a day; ops flagged the account separately.

As written, the plan pays Jon \$7,883 for June, most of it on shifts nobody worked, and another \$1,864 flows to Bruce, Ebenezer and Hannibal.

Recommendation: pay June on the worked shifts (Jon: \$1,666) and hold the rest — not cancel it — until ops confirms who posted the shifts. Hold the matching roll-ups.

Decisions needed before payroll: (1) approve the hold in writing — the plan only changes through written leadership adjustments; (2) close the gap: cap open postings per facility, or pay GTM on filled shifts. Otherwise this account's July and August windows inflate the same way.

I am not assuming bad intent: Jon asked whether there was a cap before he started, and the plan allowed it. That is why this is your call, not mine.
